

GORBEL BRINGS YOU A NEWLY REDESIGNED SOLUTION FOR OFFSET LOADS

Smooth, Consistent Movement

Need a better way to mount your manipulators and tooling? Gorbel has the solution for you. We have a new Offset Load Platform, designed to support almost any rigid or base plate mounted lifting device and manipulator. One platform can be used in multiple work cells or be moved anywhere within the crane coverage area. Our new design reduces skewing and binding of the carriers. The result? Smooth, consistent movement of your manipulators and tooling on our rails.

A New Solution

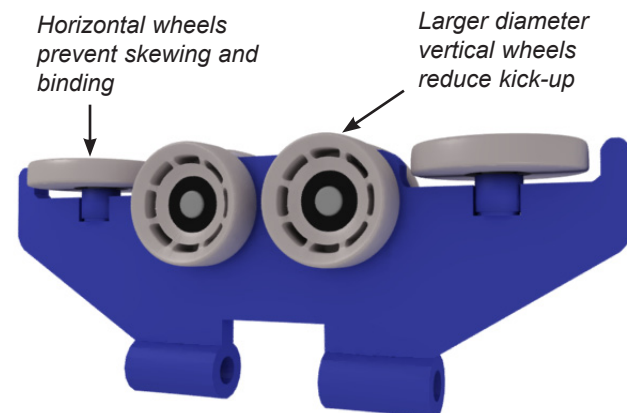

Our newly designed Offset Load Platform is easier to move, has less dead weight, and is more cost effective than our previous manipulator platform design.

Vertical Wheels Eliminate the Need for Anti-Kick Up Rollers

- We eliminated the anti-kick up rollers that we used in our previous design. The rollers we had been using did not consistently address side to side “skewing” of the 4-trolley carriers, and we found that they were often not adjusted properly in the field. Instead, our new design uses vertical wheels, machined to very tight tolerances to roll close to the track, effectively preventing “kick up.”

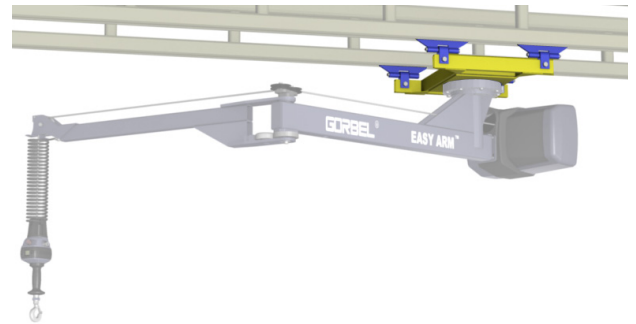

New 4-Carrier Design for More Consistent Movement

- Our new Offset Load Platform uses a 4-wheel plate design with optimally machined wheel plates.

Optional Clevis for Added Articulation

- For a rigid connection, choose the wheel plate without clevis.
- If you need additional articulation, choose the clevis option.

Gorbel's Offset Load Platform features a newly designed wheel plate that gives your manipulators and tooling smoother and more consistent movement on our rails.

Options

We have a variety of options to choose from for your offset loads:

- Trolleys with clevis (for additional articulation)
- Trolleys without clevis (for rigid connection)
- Trolleys with platform

Easy Online Ordering

A big advantage of Gorbel's Offset Loads Platforms is that you can configure, quote and order them online, with our user-friendly CraneBrain® online crane configurator.

Look for them in the Work Station Crane Design section of CraneBrain® for capacities over 1000 lbs. For 250 and 500 lb. capacities, please contact Customer Service at (800) 821-0086.
