

Pulling Car and Truck Engines Across 5 Bays with Gorbels Free Standing Work Station Cranes

Industry:
Automotive Recycler

Product:
Recycled car engines and parts

The Problem:
Employees needed towmotors to remove car engines

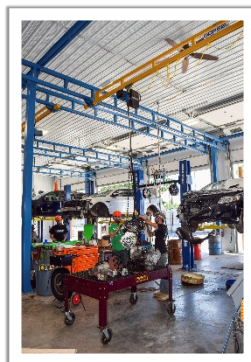

The Solution:
Gorbels Work Station Cranes

Wilbert's Inc. increases safety and productivity, lowers overhead.

Before the Gorbels Free Standing Work Station Cranes were installed at Wilbert's Inc. in upstate New York, towmotors were used to lift the engines from the cars. Employees at Wilbert's Inc. had to work around the towmotor and had to share them as the space wouldn't allow for two to three towmotors to be in the workspace at the same time.

According to Richard Wilbert, owner, they researched the overhead crane industry and quickly focused on Gorbels Work Station Cranes. The Gorbels system not only met his needs and space but was able to accommodate a dual bridge crane system that was needed to lift the cab from a pickup truck while pulling the engine.

The efficiencies gained have been tremendous according to owner Richard Wilbert. Productivity has increased and overhead has been lowered on a per car basis. And more importantly, in a much safer manner.
