

Gorbels Free Standing Work Station Cranes Help Keep Sellick Equipment Moving With Ease of Use

Industry:
Manufacturer

Product:
All terrain forklifts

The Problem:
Lack of space and efficiency in their old location

The Solution:
Gorbels Work Station Cranes

“When it came down to ease of use, it was by far Gorbels®”

After visiting several tradeshows including FABTECH USA and FABTECH Canada where they tested multiple systems, Sellick Equipment stated, “when it came down to ease of use, it was by far Gorbels®, there was no one that was even close to having a system that worked as well or easy as the Gorbels® system.”

In the old facility they were faced with multiple restrictions including height, ceiling restrictions and columns that populated the floor space with 15 foot centers. Very little movement was possible while assembling their products and they needed to utilize a fork truck for some of the processes.

With a newly built facility, it opened up opportunities to better the assembly processes. Two Gorbels® free standing workstation cranes were installed in the fabrication area to service the milling machines. For the assembly line, an 8 bay Gorbels® free standing workstation crane system servicing 16 welding cells and a 140 foot Gorbels® free standing work station crane with 4 aluminum bridges, two 2 ton and two 1 ton, were installed.

Productivity on the assembly line has increased because workers able to freely move the product down the 140 foot long, 20 foot wide assembly line without restrictions. This has opened up areas for part storage and has helped to smooth out the workflow processes for the assembly operators. During assembly, 2 speed hoists are used to position the parts.

The assembly operators at Sellick Equipment are pleased with the Gorbel® systems ease of use under the load. They are especially pleased that the load stays where it should with no drift or slide in the aluminum bridge to make precision part placement easier.
