

## Retrofit Tractor Drive Extended End Truck Tube Replacement

Your existing end trucks do not have the capability to accept your new Tractor Drives. You must replace the existing end truck tubes with new end truck tubes that have end caps to accept the Tractor Drives.

1. Remove end trucks from runways.
2. Remove bolts from extended end truck tubes in order to take off wheel plates and end truck support weldments.
3. Reassemble wheel plates and end truck support weldments to new extended end truck tubes with end caps using existing bolts and new nylock nuts.
4. Put end trucks back into the runways, as per manual.

**Note:** Make sure to reinstall runway endstops immediately after installing bridge
