

Bottom Entry Collector for FS300, FS350 & FS350S

1. Connect wires protruding from the mast pivot pin to the collector wires. Be sure to connect the same color wires to each other.
2. Place collector over top of the mast pivot pin (and collector adaptor if applicable) making sure the connected wires are pushed down inside mast pipe.
3. Lock collector in place by tightening the set screws at the base of the collector.
4. Connect the collector to the bolt mounted in the weight bearing channel by using the stabilizing arm and hardware kit provided.
5. Add appropriate size hole in the collector cover or front of weight bearing channel to allow installation of hoist power cable to collector.
6. Attach collector cover with mounting hardware provided.

Refer to drawing BECA for additional references.
